QUEEN GOOSE

Advantages of Queen Goose:

- Queen goose is the most natural, healthy, long-lasting and light filling material that can be used in the world.
- It protects the body against temperature changes and provides heat and moisture balance.
- The compatibility of the pillow used with the person's body structure and sleeping style is the most important factor in ensuring sleep quality.

- You can choose many pillows according to your sleeping style, but you know that this pillow will not make you sweat and you will wake up dry when it is a queen goose pillow, because due to its hygroscopic feature, queen goose absorbs and traps excess moisture in the environment and dries itself by giving it to the environment during the day.
- Your pillow never loses its shape, when you aerate it in the morning, it returns to its original form.
- It provides you 100% adaptability during sleep.
- It is long-lasting, washable, and you can continue to use it in the same form hygienically. Its softness gives you a unique comfort.

Technical information you will provide according to the questions you will get by your customers about queen goose;

TYPES OF FEATHER;

The feathers covering the bodies of waterfowl are of two types as back feathers and jowl feathers. These 2 types of feathers have different functions

BACK FEATHERS;

It is the outer protection shield of waterfowl. They are feathers that allow gliding in water and flying. It can be distinguished by the hard quill stem in the middle. In pillows and quilts, the back feather prevents the jowl feathers from being crushed and provides flexibility and durability for the product. It is used to provide fullness and support to meet body pressure.

JOWL FEATHER

It is the internal protection shield of waterfowl. These are feathers that protect the animal from temperatures in the air and water, which can sometimes be extremely low. It is waterproof and retains very little water. The back feathers also form a water film on its surface. Bar-Headed Goose may fly at a height of 8.800 meters. The temperature here is around -44°C . Siberian geese can occasionally be exposed to temperatures lower than -50°C . It provides a jowl feather softness in pillows and quilts, increases the volume, has heat-retention feature.

BAMBOO

- Does not contain chemicals
- Keeps cool.
- Prevents sweating.
- Natural, refreshing.
- Washable - Fast-Dries.
- Filling 30% bamboo +
70% Nanofiber.
- Ideal for spring and summer
seasons

Advantages of bamboo:

- Bamboo Quilt will be the natural and soft choice of those who want to sleep in a cool, dry sleep in hot summer and spring seasons. Bamboo quilt is naturally durable and breathable with its bamboo content.
- Due to its natural bamboo structure, it absorbs 3 times more water than cotton and dries 4 times faster. It helps the body to breathe, gives freshness, and keeps cool.
- Bamboo-Kun material, which is the natural content of bamboo, prevents bacterial growth. The products are easy to use, washable and odorless. It is ideal for spring and summer months.

THERMOLITE

Advantages of Thermolite:

- It is a technological filling material that allows sleep products produced thanks to Thermolite licensed pillow and quilt filling, to be washed repeatedly in the washing machine at 60C and to dry easily. Pillows and quilts washed at 60C are free of all dust mites and bacteria. It makes the products suitable for people with allergies. Bed hygiene is the most important and integral part of sleep quality. The pillow on which we rest at night or the quilt we cover are clean and hygienic, helping us to relax and sleep healthier.

- The bead fibers used in our pillows change place according to your motions during sleep, giving the necessary support to your head and neck. Since the beads are independent of each other, your pillow maintains its original shape.

WOOL (LANA)

Benefits of woolen quilt and pillows:

- It is nature friendly. Wool, which is an extremely healthy and natural material, does not cause industrial pollution.
- Wool pillows and quilts provide a comfortable sleep experience by allowing your body to breathe.
- With its heat balancing feature, it keeps its surface cool even in hot weather.
- Wool pillows, that dry sweat quickly, prevent you from being uncomfortable while sleeping. In addition, wool pillow types, which are known for their longevity, do not harden over time and always remain soft.

- With its allergy-free structure, wool pillows, that can be used by all skin types, help you sleep soundly.
- Thanks to its specially finished outer sheath, exit of the feathers is prevented.

ANTISTATIC

Benefits of anti-static quilt and pillows:

- With carbon-fiber fabrics that have excellent electrical conductivity, it helps you to get rid of the electricity and tension-creating stress accumulated in your body throughout the day from your body during your sleep.
- Electromagnetic waves cause a decrease in natural serotonin and melatonin hormones.

- These hormones provide protection against some pathogenic effects and guide our sleep patterns, providing a comfortable sleep and a happy awakening by absorbing static electricity in the body thanks to the fibers

RELAX (MICROFIBER)

Advantages of Microfiber (Relax) quilts and pillows:

- The air permeable structure of microfiber quilts helps to balance body temperature at nights. In other words, microfiber quilts retain heat while trapping sweat. Thus, you also get rid of sweating or cold at nights and you can sleep comfortably in any position you want without compromising on your comfort.

- Since the fiber in the structure of the microfiber quilt is a very light material, it does not make you feel heavy while you sleep, unlike traditional quilts. With its soft structure, it helps you to sleep comfortably.

- It is your friend for sleeping throughout 4 seasons thanks to its economical, easy-to-use, comfortable and breathable fabric and fiber. You can wash in your washing machine at 30 degrees.

ANTI- SNORING PILLOW

Advantages of anti-snoring pillow:

The special hollow-centered shape of the pillow opens the airways of people laying on their back, allowing them to breathe easily, reduce snoring and have a qualified sleep. Air channels around the pillow provide free air circulation, thus reducing sweating.

Its content consists of 100% cotton fabric and bead fibers.

ORTHOPEDIC PILLOW

Advantages of Orthopedic Pillows:

Orthopedic pillow takes the shape of your neck and allows you to sleep comfortably. It is soft and durable. Suitable for 60x80cm pillowcases.

It is 100% Siliconized Bead Fiber.

There are fibers of different stiffness in the two cells isolated from each other in the pillow. For this reason, the support given by the pillow to the shoulder and head is provided equally.

Bead silicon fiber is called as air fiber (Hollow Fiber). Due to its nature, bead fiber is more resistant to washing and flocking when compared to soft fiber.

Outer fleece is 100% cotton woven fabric.

UNDERBLANKET

We can call the underblanket as a bed protector in short. It is laid on the bed without a sheet, and then the bed sheet is laid down. It prevents the bed from getting dirty over time. Basically, it is divided into Quilted and Liquid-proof. Quilted underblankets are for standard use and have a cotton structure. Liquid-proof underblankets, on the other hand, do not let liquid into the bed, as the name suggests.

Liquid-proof bed protectors (underblankets) consist of 2 layers. The top layer consists of cotton (towel) and provides sleep comfort, prevents sweating and noise. The bottom layer is composed of liquid-tight polyester. It traps the liquid in the upper layer. Liquid-proof underblankets can be used in single and double beds as well as baby beds.
